

ICU DYNAMICS

BY: J. RICE (JR76683)

AGENDA

Frequency of ICU Visits

High freq

ICU Trends over 10 Years

Ward Progressions

INTENSIVE CARE UNIT VISITS

- Intensive Care Units are critical facilities to support effective healthcare
- We examine how often these resources are used by patients in the MIMIC III dataset
- After that evaluation, we will dig deeper into what happens with patients who visit ICU more frequently

ICU VISIT FREQUENCY

- We look at how often patients go to the ICU
- Of the patients who visit the ICU at least once, the majority only have 1 or 2 visits
- However, some patients have dozens of visits; we will examine patients who are visiting the ICU more than 10 times in the dataset

AGE AT FIRST ADMISSION

- We look at the age of patients who went to the ICU had their first visit
- We see two spikes, one early in life and one at age 300:
 - The early in life visits are exclusively NICU visits
 - The age 300 are patients whose ages were greater than 89 and those were masked to help preserve anonymity

How Old Were Patients when First Admitted to ICU?

AGE AT FIRST ADMISSION COMPARISON

- We are curious if there is a difference in age profiles between
- For this analysis, we ignore NICU visits and only look at patients who are still alive in the dataset
- We note some spikes in the 25–30-year-old, 50-55-, and 55–60-year-old bins

SINGLE ICU PER VISIT?

- When admitted to the ICU, how often do patients leave from the same ICU from which they were admitted?
- As expected, most of the time, patients leave from the same ICU that they are admitted
- We note that for NICUs, patients are exclusively discharged from the NICU when admitted to the NICU, which is probably expected
- Since patients move around, can we see what happens to them between the admitted ICU and discharged ICU?

First Care Unit	CCU	6714	270	281	0	74	67
	CSRU	479	8758	89	0	40	25
	MICU	399	142	20078	0	374	315
	NICU	0	0	0	8093	0	0
	SICU	92	103	456	0	8300	262
	TSICU	42	38	182	0	103	5746
		CCU	CSRU	MICU	NICU	SICU	TSICU
		Last Care Unit					

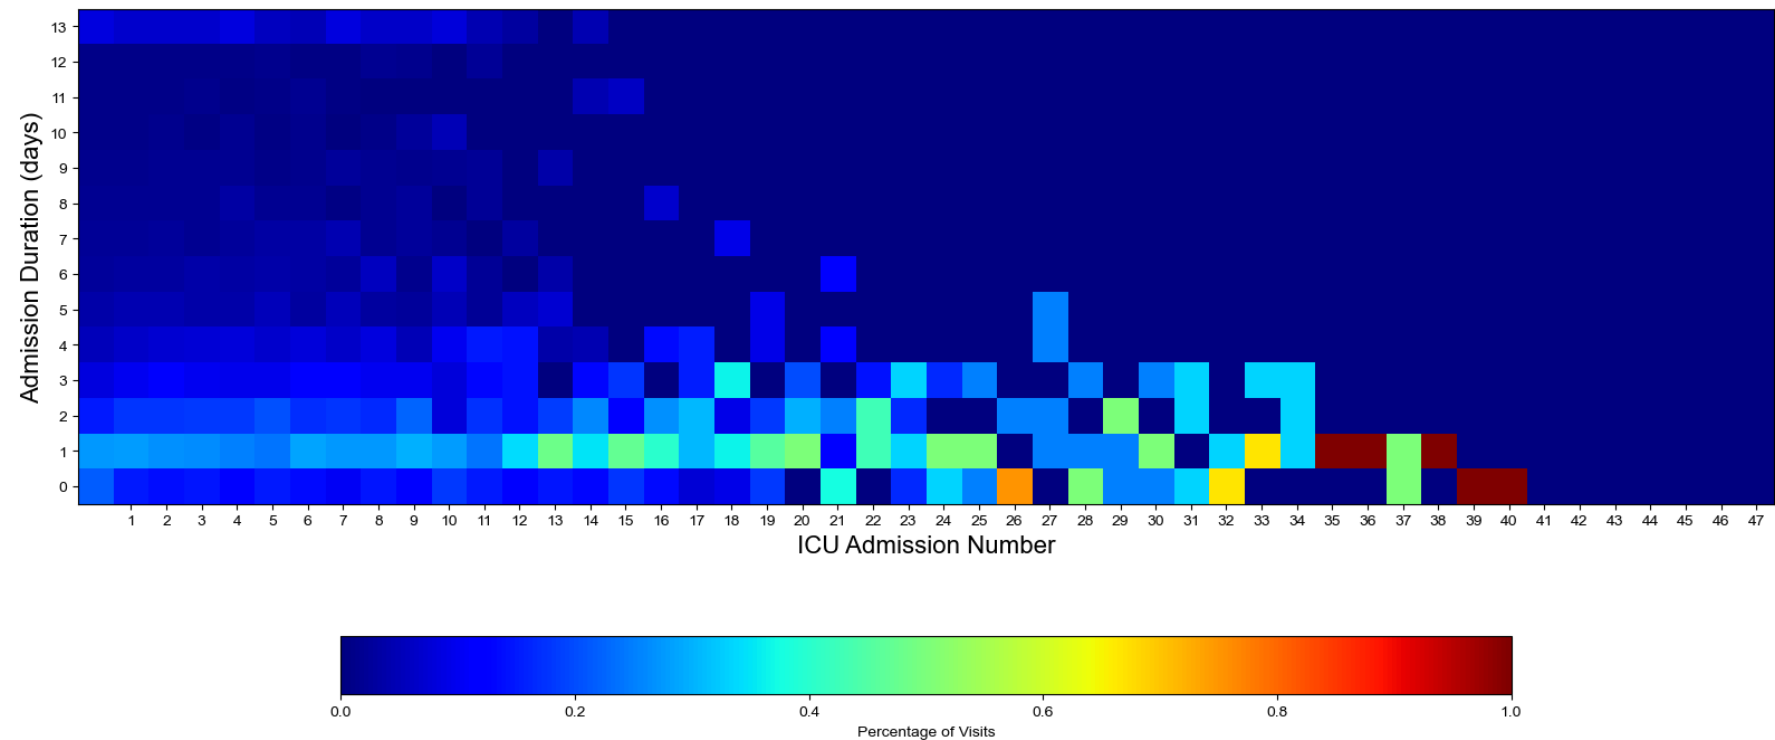

STAY DURATION BY VISIT NUMBER

- On the following slide, we examine how duration lengths vary with visit number by a patient
- Do patients that go more often require more time potentially? Or are they visits for targeted reasons so durations tend to be shorter?
- For analysis, we clip visit lengths at 14 days and we normalize by visit number
 - For the avoidance of doubt, that means that the frequencies for each visit number add to 1

STAY DURATION BY VISIT NUMBER

Admission Duration vs Visit Number
(normalized by visit number)

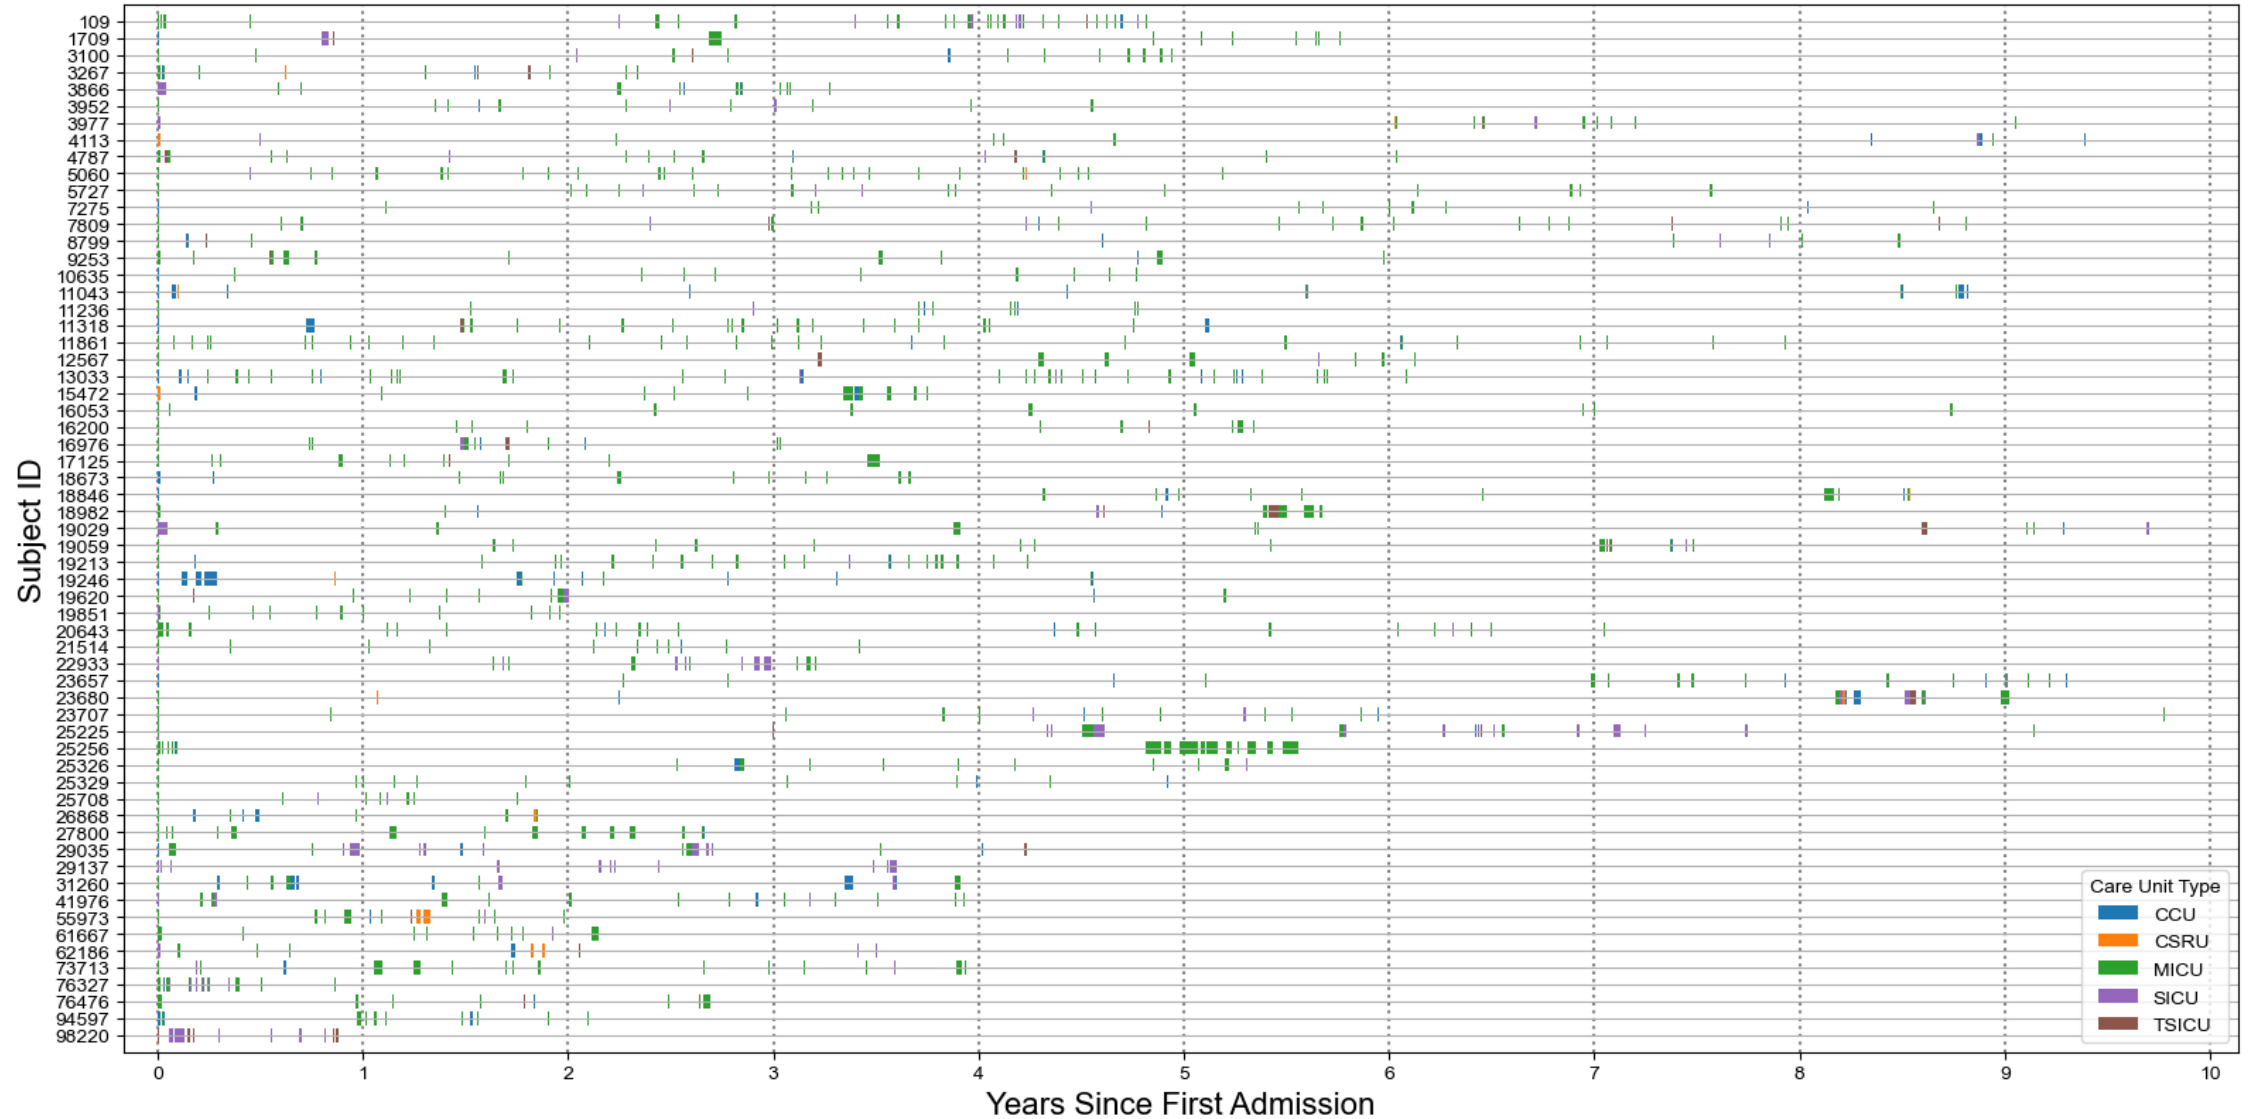

FREQUENT VISITOR ADMISSION PATTERNS

- From the first admission by high frequency visitors (>10 visits in dataset), what is the timing of the visits for the following 10 years from the first admissions
- We examine if these are grouped together or sporadic on the following slide
 - You will see both sporadic and concentrated visits
- The x-axis is set such that each patients' first visit starts at 0 years
- The width of each bar is proportional to the stay duration

ICU Visit Timing over 10 Years

Patients w/ more than 10 ICU visits

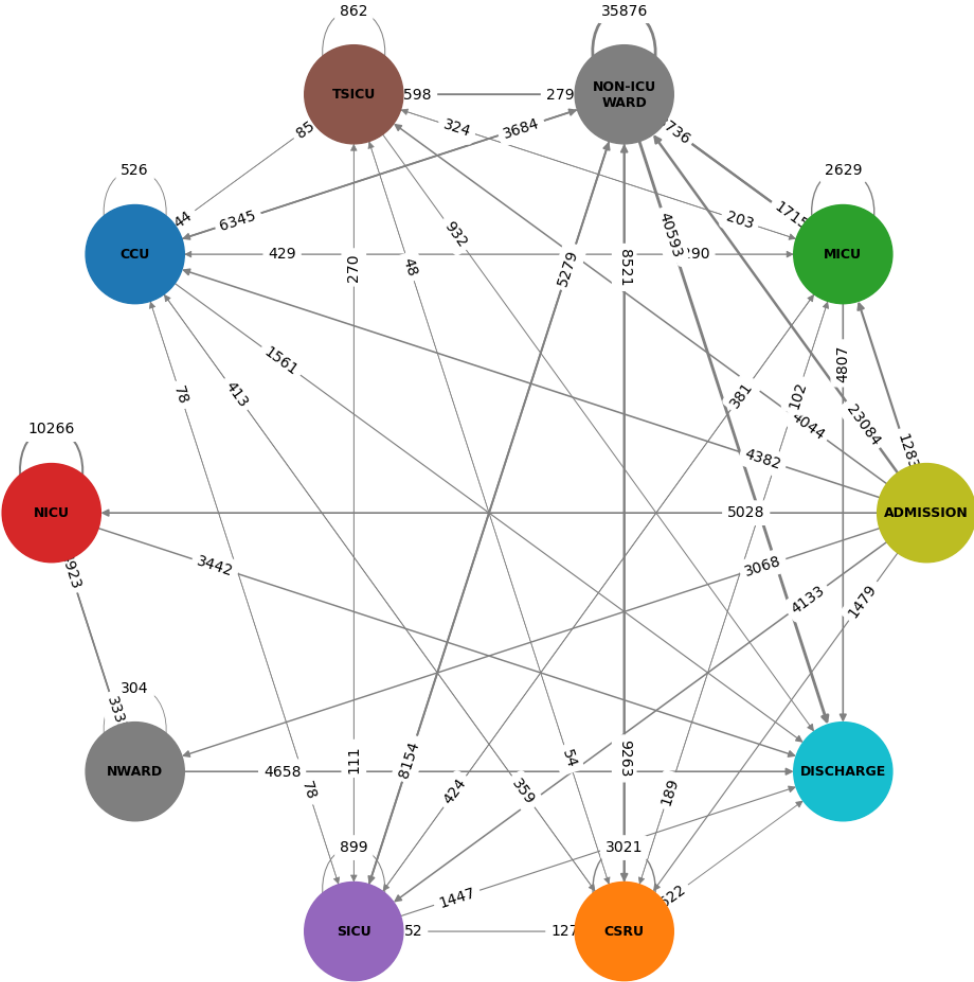

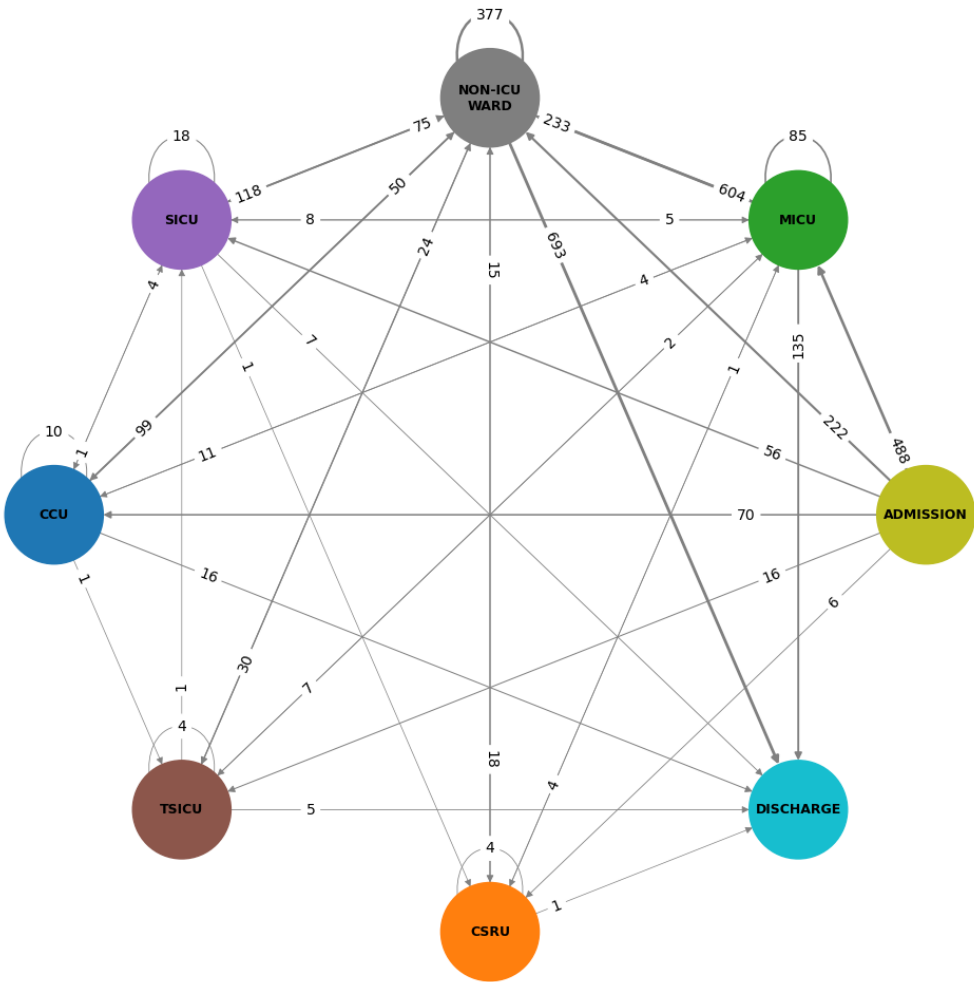

WHAT HAPPENS ONCE ADMITTED?

- For the high frequency visitors, we examine the transfer patterns using a network diagram
- We will see if there are any interesting patterns between the high frequency visitors and the rest of the population

Patient Ward Transfer Network
(Patients < 10 Visits)

Patient Ward Transfer Network
(Patients ≥ 10 Visits)

COMMENTS

- There appear to be several interesting observations that were noted; more research could be performed to see if there are any commonalities in cohorts that have experience one way or another
- These patterns may be interesting to study to see if there are systemic issues that could potentially be avoided to improve patient health outcomes
